CAREER OBJECTIVE

A highly motivated B.Tech Computer Science graduate with a specialization in Artificial Intelligence and Data Analytics from Sri Ramachandra University. Eager to begin a career in the AI and data analytics domain, with a strong foundation in machine learning, data preprocessing, and algorithmic problem-solving. Seeking an entry-level position where I can contribute to real-world projects, continue learning, and grow as a data-driven professional.

PROJECTS

Intelligent Traffic Light Control Using Deep Q-Networks (DQN) **Sept 2024**

- Built a reinforcement learning model using DQN to optimize traffic signal timings based on real-time conditions.
- Simulated urban traffic scenarios using Python to model various traffic patterns at four-way intersections.
- Incorporated reinforcement learning principles to allow the agent to learn signal timing policies that minimize vehicle wait time and improve throughput.

Graph-Based Fake News Detection **April 2025**

- Built a fake news detection system using graph-based techniques to evaluate the credibility of news articles based on their content and source connections.
- Implemented Graph Neural Networks (GNN) and Graph Convolution Networks (GCN) to classify news as fake or real based on graph topology and node features.
- Visualized complex graph structures using NetworkX and Matplotlib to improve the interpretability of classification results.

AI-Powered Medical Report Generator from Radiology Images **June 2025**
Research Intern @ SRET

- Developed an end-to-end AI system to generate automated radiology reports from chest X-ray images using EfficientNet-B0 for visual encoding and a custom memory-driven transformer decoder for report generation.
- Implemented advanced NLP techniques, including conditional layer normalization, triple attention, and BLEU-based evaluation, achieving clinically coherent and context-aware report generation on the IU-Xray dataset.

EDUCATION

Sri Ramachandra Institute of Higher Education and Research **Chennai, Tamil Nadu**
B.Tech Computer Science and Engineering (AI & DA) **June 2025**
Relevant Courses: Data Structures, OOPs, DBMS, ML, DL, Computer Vision

M.E.S Indian School (CBSE) **Doha, Qatar**
2021

SKILLS

- **Programming Languages:** C, Java, Python, SQL, ML
- **Tools/ Concepts:** NLP, RL, Data Analytics
- **Soft Skills:** Team collaboration, Problem-solving, Project-based learning
- **Languages:** English, Arabic, Urdu, Hindi, Tamil
